There were 2 bugs I noticed, 1 - wood bundle purchases and sales were labeled as fruit and veg, 2 - at the end of week 10 the game just stopped and wouldn't go any further. Overall very well implemented with few issues.

Justify your rating:

Quite repetitive, but nicely written commentary. Each of the storekeepers or people you spoke to had different personalities displayed through their speech. Once I was able to afford the tools, there is no need to buy weapons because the profit per sale does not go up and I can afford to buy more tools than weapons. Same issue with Wood bundles and ore. I expect this will change when the late game weeks are implemented. Art style is nice and the custom art for each store is a nice touch.

The game has no bugs for where it is currently at. It plays through very well and the story was incredibly well structured. It was easy to understand and allowed for the game to be played well.

There were a lot of mechanics that were added in extra which allowed for a deeper experience. In addition to this the story was written well and made the player want to get more money by chancing it and waiting to the next week to sell. Overall it is a really well made game which goes into a great level of detail.

Give an overall rating: Awesome!
